

ABSTRACT

1. ABSTRACT

Intensity Care Of Mother and Kids is to Computerize all off Aanganwadi activities such as managing all information about Mothers, generate different types reports etc. This application can store contacts up to 4000. Which can be searched very quickly and effectively with different criteria?

Functionalities of Intensity Care Of Mother and Kids:-

- Manage No of Aanganwadi Centers.
- Store up to 4000 contacts.
- Sorting can be done by first, last name.
- Search using any field in contact records.
- Quick log for ANC reports.
- Quick log for Child Card report.
- A user can manage appointments.

By using **Intensity Care Of Mother and Kids** a user can organize his/her time schedule, saves multiple information varying from business related task, Mothers and Kids information, appointment, some useful information, Various test and Doses, contact details and several multiple event in an organized manner at one place that will be easy to remember and also it will save a user's time and money.

This system deals with all included activities handled by a manual handling like paper works and conducting examination with a minimum span of time, etc.

This system is developed to eliminate all the complexities that can even occurred during the manual entry to manage information about Aanganwadi center, Schedule Task according to our priority..

In this project I am developed an A **Intensity Care Of Mother and Kids** application for Windows Operating System.

LITERATURE SURVEY

2. LITERATURE SURVEY

2.1 Initial Investigation

The project that we have undertaken gives the all information about “Aanganwadi Center Activities” and it provides such kinds of functionality (Such as: - managing all contacts, mothers, kids and center details etc.) with different-different modules. All these modules are made under different names and are integrated in one name as “**Intensity Care Of Mother and Kids**” and this is the name of the project.

The coding is done using **Visual Basic 6**. We used **Oracle 10g** as back end. To make-work easier, the project is divided into modules. The division of modules and task like, analyses, estimation, requirement etc. was the initial stage of work towards the project. The job and schedules like project specifications and planning was completed before the coding started.

2.2 Problem definition

The Solution of the problem is that develop a Windows application that is able to maintain all type of record of a Aanganwadi Center and that application should be able to solve all the problem of current system. The great advantage of this application is that it saves lot of time and stationary as well.

The new system has been designed as per the user requirements so that it is fulfills almost all the requirement.

- An application can be access any time.
- Perform all the small operation on Computer.
- Maintain all Aanganwadi Center record on Computer.
- Maintain all Mother record on Computer.
- Get information about every Aanganwadi, Mother and Kids on a single click.
- Provide entry for Various type test of organization.
- A user of this app can manage appointments.
- Fast Working.
- App should provide good UI.

2.3 Evaluation of Existing System

The Current system of a company or firm is highly complicated and expensive. In terms of time, every time you have to go through the whole procedure for a simple task. Various tasks have to be done repeatedly.

- Keep information about mother, kids, and Aanganwadi Center.
- Keep record of all.
- Fix a meeting.
- Keep record of past meeting.
- Keep records of a/c like various types test.

Weaknesses in Current System

The current system is as mentioned earlier very complicated and expensive as compared to the new system. It also wastes the precious time of the user.

2.4 Cost Estimation

COCOMO MODEL

Constructive Cost Model (COCOMO) is an example of static single variable model.

Barry Boehm introduces three forms COCOMO, they are

- Basic COCOMO
- Intermediate COCOMO
- Advanced COCOMO

COCOMO may be applied to three classes of software project.

- Organic Projects: - Relatively small, simple software project.
- Semi – detached Projects: - Intermediate (in size & Complexity) software projects.
- Embedded projects: - software project that must be developed within a set of tight hardware, software, and operational constraints.

BASIC COCOMO:- The basic COCOMO equation take the form , $E=a(KLOC)^b$ where E is the effort applied in man- months, KLOC is the estimated number of delivered lines of code for the project (expressed in thousands). The coefficient a, b are given,

Mode	a	b
Organic	2.4	1.05
Semi-detached	3.0	1.12
Embedded	3.6	1.20

Basic COCOMO is good for quick, early, rough order of magnitude estimates of software costs, but its accuracy is necessarily limited.

Cost of project:-

$$\begin{aligned}\text{Effort} &= a(KLOC)^b \\ &= 2.4(1.56)^{1.05} \\ &= 2.4*1.638 \\ &= 3.9312\end{aligned}$$

$$\text{Cost} = \text{Effort} * \text{Hours per Month} * \text{Labor}$$

Rate With minimum 88 (daily 4 hours) working hours per Month and labor rate of Rs. 50 per hour then our total working hours are 352 Hours (88 days).

$$\begin{aligned}\text{Cots} &= 3.9312 * 352 * 50 \\ \text{Rs.-} &= 69189.12/-\end{aligned}$$

2.5 Software Selection

2.5.1 FORNT END TOOLS

Visual Basic :-

Like the BASIC programming language, Visual Basic was designed to accommodate beginner programmers. Programmers can create both simple and complex GUI applications. Programming in VB is a combination of visually arranging components or controls on a form, specifying attributes, and actions for those components, and writing additional lines of code for more functionality. Since VB defines default attributes and actions for the components, a programmer can develop a simple program without writing much code. Programs built with earlier versions suffered performance problems, but faster computers and native code compilation has made this less of an issue.

Though VB programs can be compiled into native code executable from version 5 on, they still require the presence of around 1 MB of runtime libraries. Runtime libraries are included by default in Windows 2000 and later. Earlier versions of Windows (95/98/NT), require that the runtime libraries be distributed with the executable. Forms are created using drag-and-drop techniques. A tool is used to place controls (e.g., text boxes, buttons, etc.) on the form (window). Controls have attributes and event handlers associated with them.

Default values are provided when the control is created, but may be changed by the programmer. Many attribute values can be modified during run time based on user actions or changes in the environment, providing a dynamic application. For example, code can be inserted into the form resize event handler to reposition a control so that it remains centered on the form, expands to fill up the form, etc. By inserting code into the event handler for a key press in a text box, the program can automatically translate the case of the text being entered, or even prevent certain characters from being inserted.

Visual Basic can create executable (EXE files), ActiveX controls, or DLL files, but is primarily used to develop Windows applications and to interface database systems. Dialog boxes with less functionality can be used to provide pop-up capabilities. Controls provide the basic functionality of the application, while programmers can insert additional logic within the appropriate event handlers.

For example, a drop-down combination box automatically displays a list. When the user selects an element, an event handler is called that executes code that the programmer created to perform the action for that list item.

Alternatively, a Visual Basic component can have no user interface, and instead provide ActiveX objects to other programs via Component Object Model (COM). This allows for server-side processing or an add-in module.

The runtime recovers unused memory using reference counting, which depends on variables passing out of scope or being set to *Nothing*, avoiding the problem of memory leaks common to other languages. There is a large library of utility objects, and the language provides basic object oriented support. Unlike many other programming languages, Visual Basic is generally not case sensitive—though it transforms keywords into a standard case configuration and forces the case of variable names to conform to the case of the entry in the symbol table. String comparisons are case sensitive by default.

The Visual Basic compiler is shared with other Visual Studio languages (C, C++), but restrictions in the IDE do not allow creation of some targets (Windows model DLLs) and threading models.

2.5.2 BACK END:-

Oracle 10g:-

Every organization has data that needs to be collected, managed, and analyzed. A relational database fulfills these needs. Along with the powerful features of a relational database some requirements for developing and maintaining the database. Data analysts, database designers, and database administrators (DBAs) need to be able to translate the data in a database into useful information for both day-to-day operations and long-term planning.

Relational databases can be a bit intimidating at first, even if you're a specialist in some other informational technology area, such as networking, web development, or programming. This chapter will give you a good overview of current relational and object-relational database concepts. It begins by comparing a database with another tool that almost everyone has used—a spreadsheet (also known as the "poor man's" database). Then you'll learn about the basic components of a relational database, the data modeling process, and object-relational database features.

Structured Query Language (SQL) is the set of statements with which all programs and users access data in an Oracle database. Application programs and Oracle tools often allow users access to the database without using SQL directly, but these applications in turn must use SQL when executing the user's request.

3.5.3 Reason of using this tool:- The main reason of using this tools is that this is an Windows based application and windows based application can be develop using java only. As I know all the highly secured application develops in VB 6. So I develop this application on android using Visual Basic.

H/W AND S/W REQUIREMENTS

3. H/W AND S/W REQUIREMENTS

3.1 Hardware Requirements and Specification

- **Hardware Requirements:-**

- Processor : 1.66 GHz and Higher.
- Memory Size : 1 GB RAM.
- Storage : 80 GB.
- Display : Colors Display, High Colors (32 Bit).
- Keyboard : Key Pad.

- **Hardware Specifications:-**

- Processor : 1.66 GHz and Higher.
- Memory Size : 1 GB RAM.
- Storage : 80 GB.

3.2 Software Requirements and Specifications

- **Software Requirements:-**

- Platforms : Windows XP and Higher.

- **Software Specifications:-**

- Language : MS Visual Basic 6.0
- Database : Oracle 10g.
- IDE : Visual Studio 6.

SOFTWARE REQUIREMENT SPECIFICATION

4. SRS

4.1 Software Scope

The first activity in software project planning is the determination of software scope. Software scope describes the data and control to be processed, function, performance, constraints, interfaces, and reliability.

4.1.1 Gathering Information Necessary for Scope

The most commonly used technique to bridge communication gap between customer and the software developer to get the communication process started is to conduct a preliminary meeting or interview. When I visited the site we have been introduced to the Manager of the center, there were another two persons. Out of one are the technical adviser and another one was the cost accountant. Neither of us knows what to ask or say. We were very much worried that what we say will be misinterpreted.

We started to asking context-free questions; that is, a set of questions that will lead to a basic understanding of the problem. The first set of context-free questions was like this:

- What do you want to be done?
- Who will use this solution?
- What is wrong with your existing working systems?
- Is there another source for the solution?
- Can you show us (or describe) the environment in which the solution will be used?

After first round of above asked questions. We revisited the site and asked many more questions considering the final set of questions.

- Are our questions relevant to the problem that you need to be solved?
- Are we asking too many questions?
- Should we be asking you anything else?

4.1.2 Feasibility

Not everything imaginable is feasible, not even in software. Software feasibility has four dimensions:

Technology—is a project technically feasible? Is it within the state of the art?

Finance – Is it financially feasible?

Time—will the project be completed within specified time?

Resources—does the organization have the resources needed to succeed?

After taking into consideration of above said dimensions, we found it could be feasible for us to develop this project.

Technical Feasibility:-

Our project is “**Intensity Care Of Mother and Kids**” which is going to be implemented on an Android platform. For the front end we use **Visual Basic** which has capability to develop an **Windows Apps.** and it support the functions which we want to implement. As a back end we use **Oracle 10g.** It has capability to store large data and give output according to query.

- 1) **Are** there technical guarantee of accuracy, reliability, ease of access and data security?
 - **Yes** the technology Visual Basic which we are using this is fully secure, reliable, guarantees ease of access.
- 2) **Can** be the system expand in future?
 - **Yes**, the system can be expanded and many more modules like: - **Aanganwadi System** etc. might be added as per time and requirement of organization.

Economic Feasibility:-

Economic analysis is the most frequently used method for evaluating the effectiveness of a new system. More commonly known as cost/benefit analysis, the procedure is to determine the benefits and savings that are expected from a candidate system and compare them with costs. If benefits outweigh costs, then the decision is made to design and implement the system. An entrepreneur must accurately weigh the cost versus benefits before taking an action. Time Based: Contrast to the manual system management can generate any report just by single click.

Cost Based:

No special investment is needed to develop this application because it is completely base on android platform. And Windows app is developing using Visual Basic. So here whichever tools are required for development they all are open source (like: - VB).

No specific training is required for user to use this app. Investment requires only once at the time of installation. The software used in this project is freeware so the cost of developing the app is minimal.

Time Feasibility:-

Time feasibility is a determination of whether a proposed project can be implemented fully within a stipulated time frame. If a project takes too much time it is likely to be rejected. The time duration 4-month was sufficient for this project to develop this application.

4.2 Product Perspective

This project is completely based on **Visual basic** and **Windows** technology. The concept behind making the project is to understanding the features of **VB** and **VB.net**. It provides various features so that whole application can be efficiently used by it all the real hard code is already written for us using eclipse. It is developed for Android OS based mobile which is growing with a rapid speed in the market and with a complete graphical development environment.

The Project is aimed at develop an application to the new mobile operating system Android which is created new revolution in mobile operating systems.

Intensity Care Of Mother and Kids is to Computerize all Agganwari Center activities such as managing all contacts, expenses, appointments etc. This application can store contacts up to 4000 which can be searched very quickly and effectively with different criteria.

4.3 User Classes and Characteristics

Class: - User

- Users can add/update/delete Aanganwadi Account with their all information.
- Users can add/update/delete an Mothers and kids with their all information.
- Users can manage 4000 contacts.
- User can keep record of all Various test of Mother and kid.

4.4 Features of Proposed System

- The Windows application will be able to serve the Aanganwadi center activity.
- To make the Aanganwadi Center activity fast, reliable, and error free.
- User can maintain all the dept. of his Aanganwadi center and keep records about all of its employee.
- This is a single user application only 1 user can access it at a time..
- Sort by first, last or Aanganwadi name.
- Search using any field in contact records.
- Quick log for various test reports.

4.5 Functional and Non Functional Requirements

The inputted data has to pass through various checks. Few of the important validation checks that cannot be skipped and were kept in mind while developing the software are:-

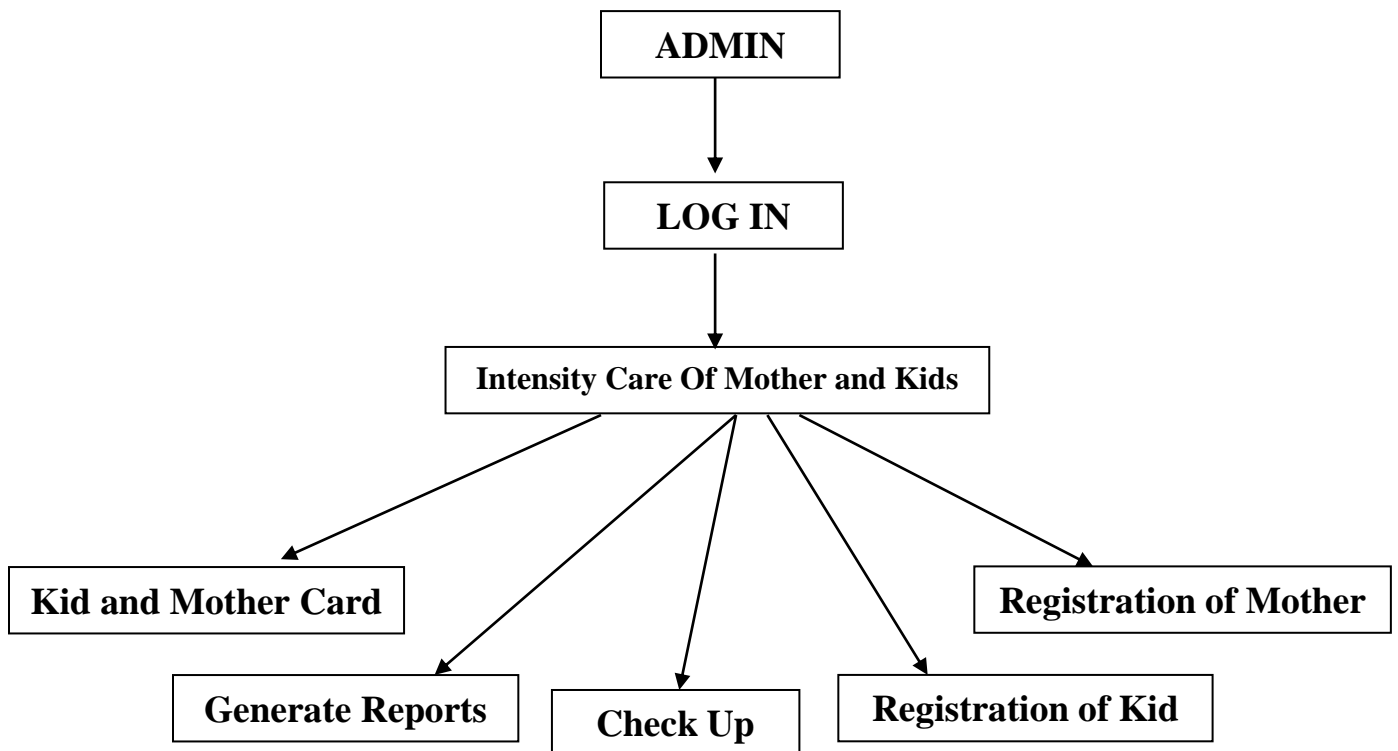

- The verification of the credentials of the user by Windows security (Lock/Unlock).
- Verify all the fields whether they are duly filled before adding/deleting /modifying.
- Verify only textual information should be filled in the fields storing textual information and no special characters should be allowed.
- Verify that only numbers are entered in the fields storing numeric values.
- Changes made should be reflecting the database.

SYSTEM DEFINITION

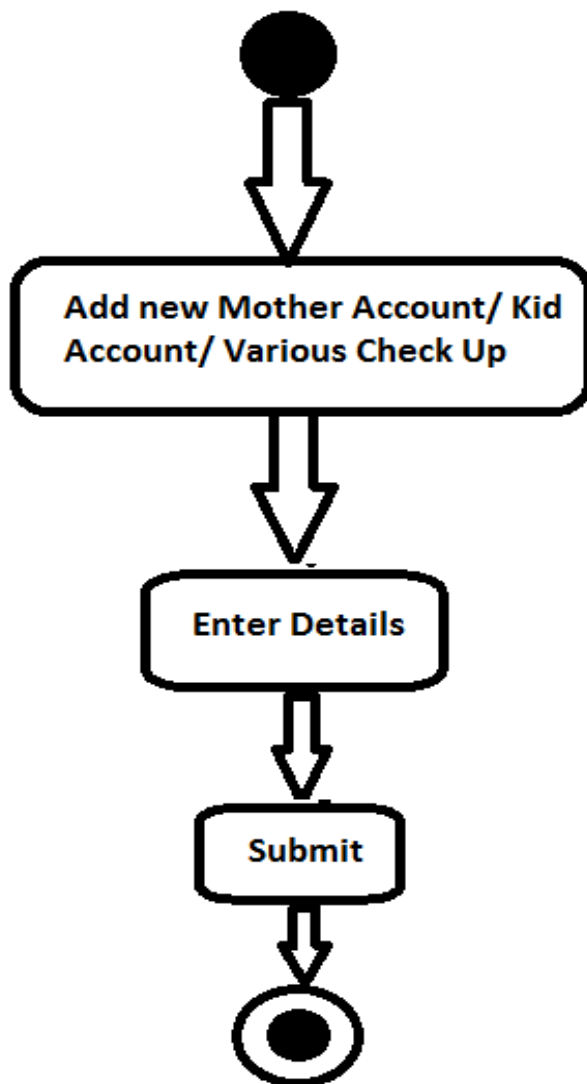

5. STYSTEM DEFINATION

5.1 System Architecture

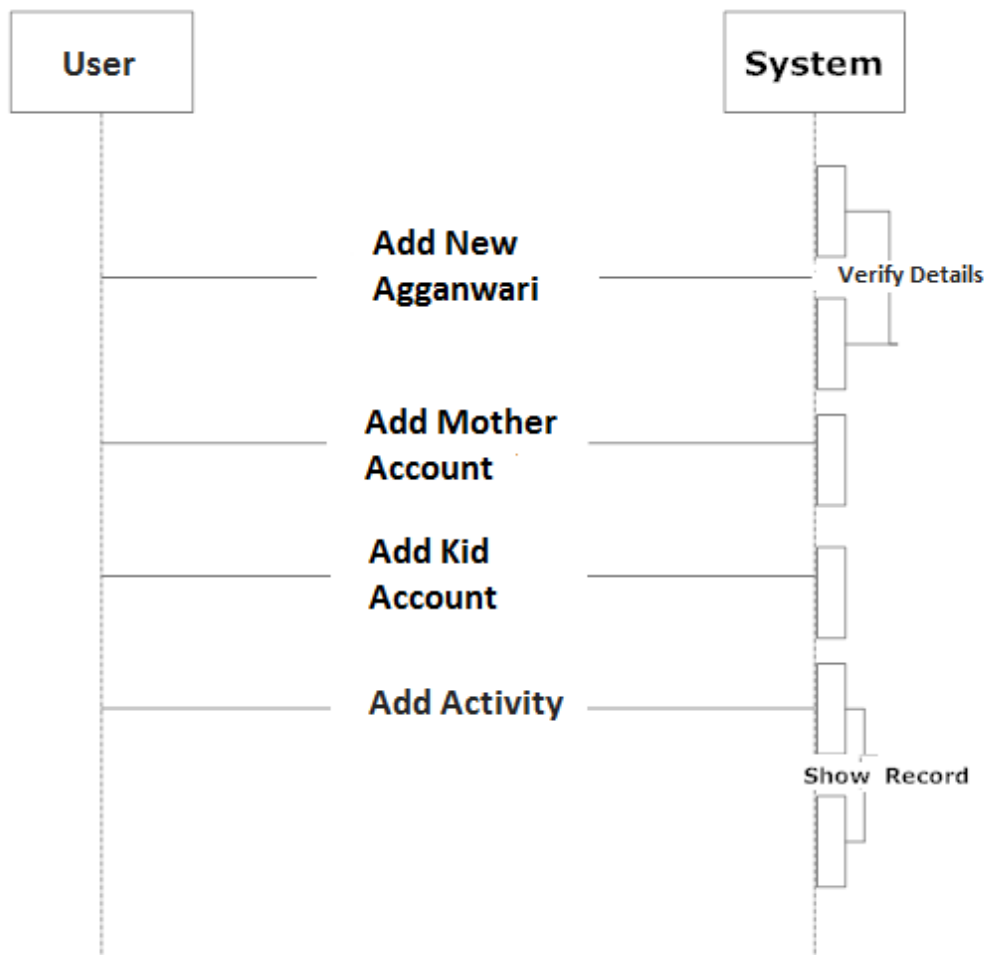

Intensity Care Of Mother and Kids Architecture

5.2 Activity Diagram

5.3 Sequence Diagram

5.4 Data Flow Diagram

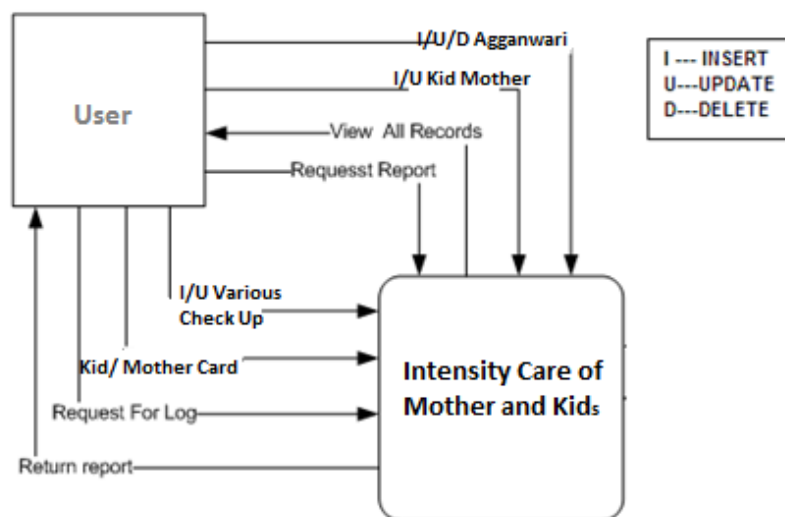

A **data-flow diagram (DFD)** is a graphical representation of the "flow" of data through an information system. DFDs can also be used for the visualization of data processing (structured design).

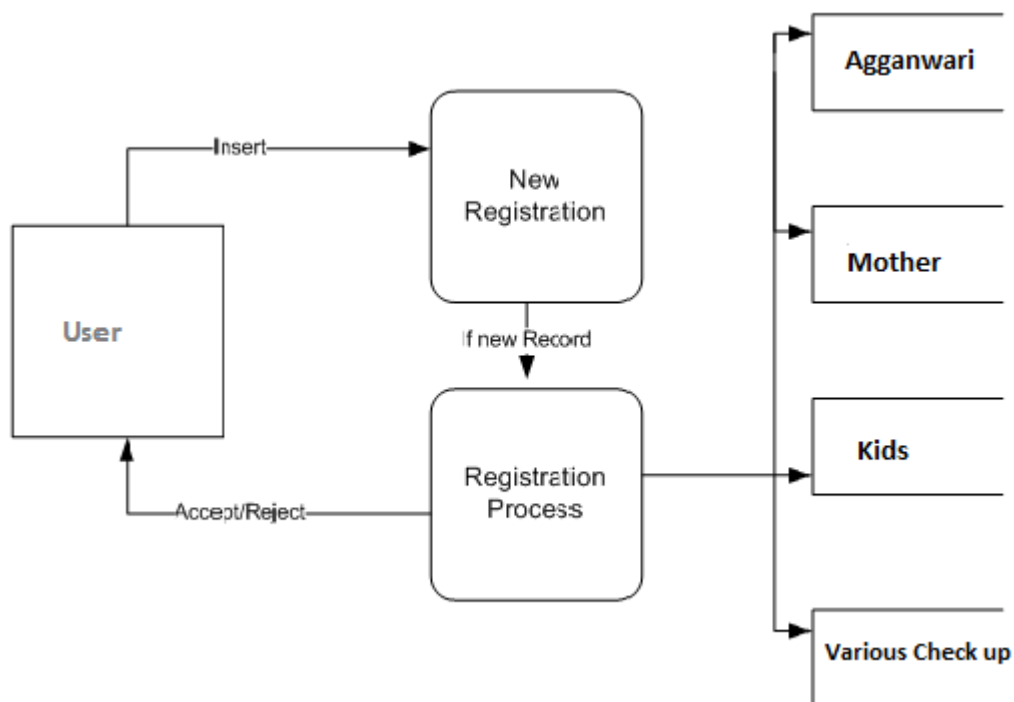

On a DFD, data items flow from an external data source or an internal data store to an internal data store or an external data sink, via an internal *process*.

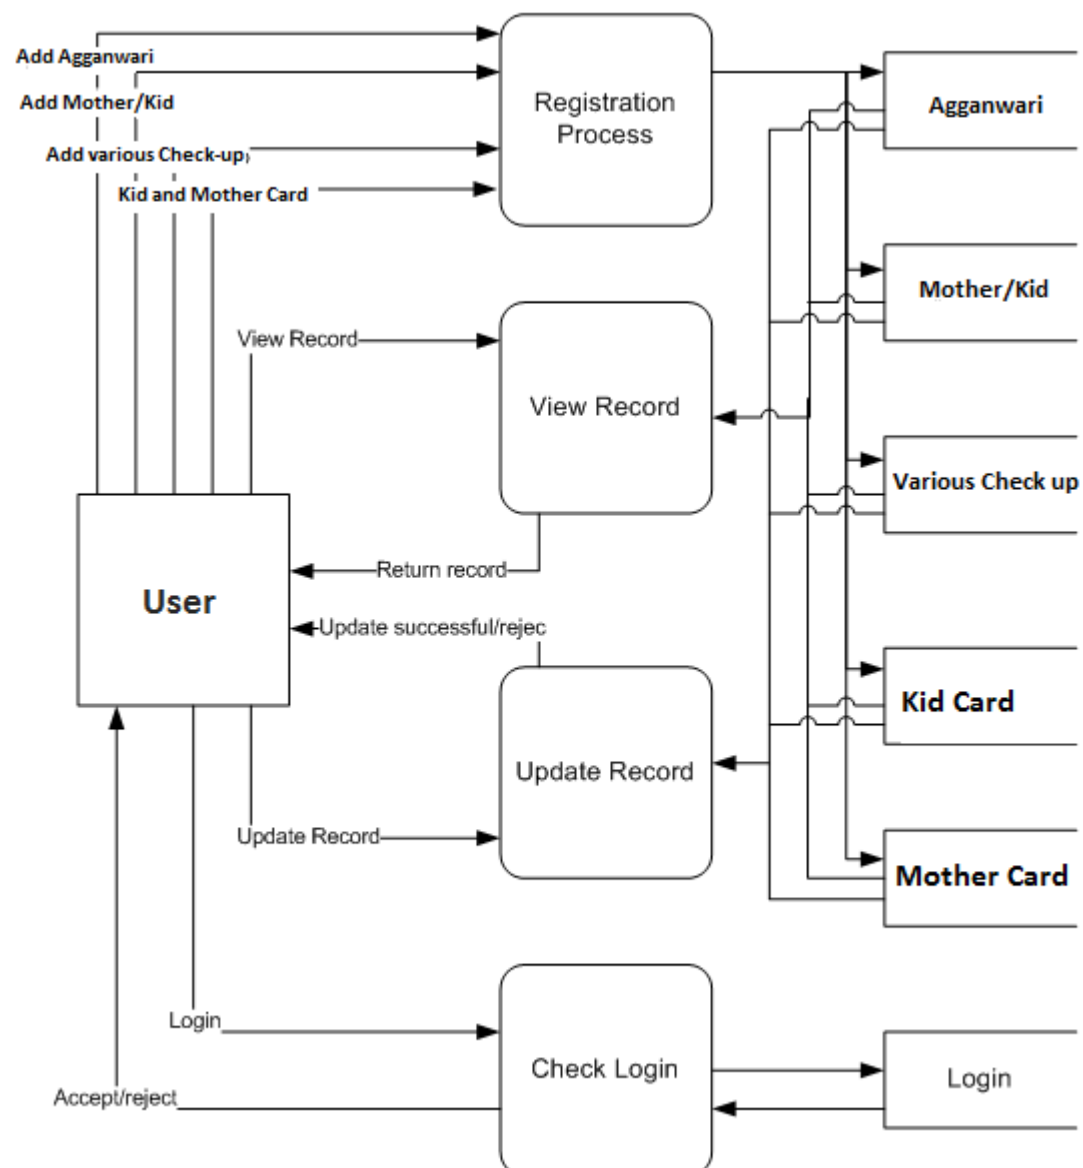

A DFD provides no information about the timing or ordering of processes, or about whether processes will operate in sequence or in parallel. It is therefore quite different from a flowchart, which shows the flow of control through an algorithm, allowing a reader to determine what operations will be performed, in what order, and under what circumstances, but not what kinds of data will be input to and output from the system, nor where the data will come from and go to, nor where the data will be stored (all of which are shown on a DFD).

DETAILED DESIGN

6. DETAILED DESIGN

6.1 ER Diagram

6.2 Data Base Design

After carefully understanding the requirements or the client the entire data storage requirements are divided into tables. The below tables are normalized to avoid any anomalies during the course of data entry.

Aanganwadi Account:-

The screenshot displays the Oracle Database Express Edition Object Browser interface. The browser shows the 'AGGANWARITABLE' table structure with the following columns:

Column Name	Data Type	Nullable	Default	Primary Key
AGGANID	VARCHAR2(30)	No	-	1
AGGANREGNO	VARCHAR2(10)	Yes	-	-
RGDATE	DATE	Yes	-	-
UPPERCENTER	NUMBER(10,0)	Yes	-	-
CENDATE	DATE	Yes	-	-
ASHA	VARCHAR2(50)	Yes	-	-
ANM	VARCHAR2(50)	Yes	-	-
UPPERHC	VARCHAR2(100)	Yes	-	-
FHC	VARCHAR2(100)	Yes	-	-
HOSFRU	VARCHAR2(100)	Yes	-	-
CONTECTNO	NUMBER(13,0)	Yes	-	-
EMAIL	VARCHAR2(50)	Yes	-	-
PASSWORD	VARCHAR2(50)	Yes	-	-
CENTER	VARCHAR2(50)	Yes	-	-
OWNER	VARCHAR2(50)	Yes	-	-

The interface also shows a list of tables on the left, including AFTERDELIVERY, AGGANWARITABLE, BEFOREDEL, DOSE, KIDTABLE, MOTHERTABLE, and PRAGTABLE. The bottom status bar indicates the application version as 2.1.0.00.39 and the copyright as 1999, 2006, Oracle. All rights reserved.

MotherTable :-

Oracle Database Express Edition interface showing the structure of the MOTHERTABLE. The table has 17 columns. The primary key is COUPLENO.

Column Name	Data Type	Nullable	Default	Primary Key
COUPLENO	NUMBER(10,0)	No	-	1
AGGANID	VARCHAR2(30)	Yes	-	-
PLNAME	VARCHAR2(50)	Yes	-	-
HUSNAME	VARCHAR2(50)	Yes	-	-
BDATE	DATE	Yes	-	-
EDUCATION	VARCHAR2(50)	Yes	-	-
ADDRESS	VARCHAR2(100)	Yes	-	-
CITY	VARCHAR2(50)	Yes	-	-
STATE	VARCHAR2(50)	Yes	-	-
DIST	VARCHAR2(50)	Yes	-	-
MOBNO	NUMBER(13,0)	Yes	-	-
CITYPIN	NUMBER(10,0)	Yes	-	-
TOTALCHILD	NUMBER(10,0)	Yes	-	-
JSIREGNO	NUMBER(10,0)	Yes	-	-
JSIPADMON	NUMBER(10,0)	Yes	-	-
JSIDATE	DATE	Yes	-	-
PHOTO	VARCHAR2(4000)	Yes	-	-

Language: en-us Application Express 2.1.0.00.39 Copyright © 1999, 2008, Oracle. All rights reserved.

KidTable:-

Oracle Database Express Edition interface showing the structure of the KIDTABLE. The table has 10 columns. The primary key is KIDREGNO.

Column Name	Data Type	Nullable	Default	Primary Key
KIDREGNO	NUMBER(10,0)	No	-	1
COUPLENO	NUMBER(10,0)	Yes	-	-
AGGANID	VARCHAR2(20)	Yes	-	-
KIDNAME	VARCHAR2(30)	Yes	-	-
MOTHERNAME	VARCHAR2(50)	Yes	-	-
FATHERNAME	VARCHAR2(50)	Yes	-	-
BIRTHDATE	DATE	Yes	-	-
GENDER	VARCHAR2(10)	Yes	-	-
KIDWEIGHT	NUMBER(10,0)	Yes	-	-
PHOTO	VARCHAR2(4000)	Yes	-	-

Language: en-us Application Express 2.1.0.00.39 Copyright © 1999, 2008, Oracle. All rights reserved.

AfterDelivery:-

The screenshot shows the Oracle Database Express Edition interface. The browser address bar displays the URL: <http://127.0.0.1:8080/apex/f?p=4500:1001:2596546023216063::NO>. The user is logged in as 'KID'. The 'Object Browser' tab is active, showing a list of tables on the left: AFTERDELIVERY, AGGANWARITABLE, BEFOREDEL, DOSE, KIDTABLE, MOTHERTABLE, and PRAGTABLE. The 'AFTERDELIVERY' table is selected, and its structure is displayed in the main pane. The table has 14 columns, all of which are nullable and do not have a default value or primary key.

Column Name	Data Type	Nullable	Default	Primary Key
COUPLENO	NUMBER(10,0)	Yes	-	-
LADYNAME	VARCHAR2(50)	Yes	-	-
DELIVERYDATE	DATE	Yes	-	-
DELIVERYPLACE	VARCHAR2(50)	Yes	-	-
DELIVERYTYPE	VARCHAR2(50)	Yes	-	-
PRAGNANCEY	VARCHAR2(30)	Yes	-	-
HOSPITALPERIOD	VARCHAR2(30)	Yes	-	-
KIDGENDER	VARCHAR2(20)	Yes	-	-
KIDCRYAFTERBORN	VARCHAR2(30)	Yes	-	-
KIDWEIGHT	NUMBER(10,0)	Yes	-	-
HOSPITALDECHARGEDATE	DATE	Yes	-	-
DELIVERYRESULT	VARCHAR2(30)	Yes	-	-
HOPE	NUMBER	Yes	-	-
PROBLEM	VARCHAR2(4000)	Yes	-	-

IMPLEMENTATION

7. IMPLEMENTATION

Develop Phase

Implementation in the development phase is the stage in which the already developed system is implemented module wise. In this way whole system, which consists of various modules is implemented. The advantage of implementing at development phase is that the system can again go for testing if any errors are detected.

Implementation is the next phase of the system development. Implementation is a phase where a number of activities that have been going in parallel have to be culminated. An important activity in this phase is preparation of the installation plan. A detailed plan has to be prepared in terms of hardware and procurement and installation well before the actual software is ready.

When the new system is expected to come to life from a particular date, all the old data has to be entered into the new system. This also required conversion of old data into the new format.

User training forms one of the most important parts of system implementation. A good system with no users is not of any use. A training program has to be built to impart training. Different users may require different levels of training. In the industry, the uses are

enthusiastic about the system. Hands on training on the software are being imparted to the users according to their level of knowledge of computers.

Physical Implementation

Physical implementation includes preparation of site for the new system, implementation of hardware and software. Identifying the places to install the necessary hardware did site preparation. Adequate power supply arrangements are made and arrangements for install the computers are made.

Direct Implementation

This is the implementation approach where the new system becomes operational directly from the first day. This strategy is adopted for small and medium sized applications that are not highly critical. The advantage of this approach is that it completely disables user's tendency to slip back into their old practices, which they have been adopting for years.

Parallel Run

This is the commonly used strategy during implementation. In this strategy old system is run in parallel with the new system. Reports and figured being produced from the new system can be verified with the old one to ensure that the new outputs from the two systems are bound to be different; some of the more critical figures can always be compared and reconciled. This gives an enormous amount of confidence to the users that the new system is indeed accurate. It also ensures that in case something drastically. Wrong with the software, the activities in the organization do not come to a grinding halt, since the old system is available.

Phased Approach

In phased approach for implementing the software, implementation of modules is phased out within same application itself. In this approach, it is decided to start using some of the modules initially. Once this stabilizes, the other modules are implemented.

TESTING

8. TESTING

8.1 QA Plans:-

QA plans are the designing of test strategies and from a quality viewpoint are written as soon as the specifications are ready. If the test plans are written early in the life cycle the error in the specifications are found before the starting of coding. Plans should be made to carry out each of the testing strategies as early as possible in the SDLC.

8.2 Type of testing performs:-

Visual Basic **provides** its own testing tool to test Android application we don't need to use any other tools to test the Android application some of the Testing perform on the application are

- **CODE TESTING**

The code testing strategy examines the logic of the program. For this testing method tests were made that result in executing of every instruction of the program or the module.

- **SPECIFICATION TESTING**

In the specification testing, the program is tested to see if it meets the specifications. It was assumed that if the program meets the specifications and achieves the correct results, it would not fail.

8.3 Objective of testing:-

Once the programming part is over, the software is tested. This is done to ensure that the software works in the way that it was supposed to work. Also bugs, if any, are removed once these are found. The goal of testing is to find errors. A test, which reveals an error is more useful, than hundreds of test that sail smoothly. Thus testing can only show the presence of an error however it can never show the absence of an error. Good testing procedures followed by well devised testing strategies and testing data can help in quality assurance and decrease the chances of system failure.

8.4 Techniques of testing:-

▪ BLACK BOX TESTING

This form of testing is used during System or Acceptance testing where the system is regarded, as a “black box” i.e. the tester does not know. The tester Gives the required inputs and checks the outputs. If the outputs don’t tally with expected results, an error is reported.

▪ WHITE BOX TESTING

This is used in the Unit Testing (to a limited extent) where the technical people know the internals of the system. Checking that all branches and loops of code are executed, intermediate and temporary files are updated properly and hand offs to other systems or modules are written in the correct format does testing.

• Test case 1 :

Project Name:	Intensity Care of Mother and Kids	Testing Date:	21-01-2014
Test Case Name:	Test1	Test Case Number:	AO-1
Written by:	Team member	Approved by:	Project guide
Description:	In this module we are adding employee in the specific dept.		

Scenario

#	Function to Test	Expected Results	Actual Result	Remark
1	Adding Aanganwadi	Aanganwadi Should Be Added	Aanganwadi Successfully Added	Pass
2	The user should be prompted if the All Fields are not valid or blank	The user should be prompted if All for answers are not filled	The user was prompted	Pass
3	Update Aanganwadi	Aanganwadi should be delete/update if Admin want to update	Aanganwadi are successfully update/delete.	Pass
4	No Blank fields must be allowed at The time of adding Employee	The system should prompt user for the empty fields	The system prompted user of the empty fields	Pass

Conclusion: All the functionality of this module working properly.

Test case 2 :

Project Name:	Intensity Care of Mother and Kids	Testing Date:	21-6-2013
Test Case Name:	Test2	Test Case Number:	AO-2
Written by:	Team member	Approved by:	Project guide
Description:	The main task of this module is to maintain all the activities related to the income and expenses and manage them		

Scenario				
#	Function to Test	Expected Results	Actual Result	Remark
1	Select New Mother Registration From Main Form	Go To New mother Registration Form	System is forwarding request on the next page	Pass

2	Select New Kid Registration From Main Form	Go To New Kid Registration Form	System is forwarding request on the next page	Pass
----------	--	------------------------------------	---	------

Conclusion: All the financial activities are working properly

CONCLUSION

9. CONCLUSION

9.1 Conclusion

The project is designed to develop efficient application for any Small firm user to maintain their Aanganwadi activity. By this application user don't have to waste their time. System is capable to handle all the operation of business. And provide all the facilities which an essentials. There were so many difficulties while coding the project and it was a challenge for me to overcome difficulties from which I able to learn many new things. It was tremendous experience to learn new things.

9.2 This application offers the following advantage:-

- It is generic software, so it can be used by the any organization.
- Keep large amount of information about employee, department, expenses, and income.

- It can install any an Windows device like: - Windows Xp,7,8,8.1. etc.

9.3 Limitation of the application

- It can be install only on an Windows platform.

9.4 Difficulties encountered during project

The main task which took lots of time and create so much difficulty was how to Manage the resolution of screen because every mobile having different size of screen and second task was to maintain Date but at last we have done all the things successfully.

FUTURE ENHANCEMENT

10. FUTURE ENHANCEMENT

Future Scope

Since Object Oriented programming is used here for developing this system, there are every chances of reusability of the codes in other environment even in different platforms. The scope of the '**Intensity Care of Mother and Kids**' is very broad in future. Because according to the surveys the currently 50-60% smart phones are having Windows Operation System. This application contains various and different kinds of information related to Aanganwadi Office.

The features that will be developed and integrated with present structure of **Intensity Care of Mother and Kids** are:-

- **Intensity Care of Mother and Kids** will be available on various platforms like: -
Windows.
- The product will provide more user friendly UI.

USER MANUAL

11. USER MANUAL

- **User Manual For Add Aanganwadi Account.**

1. Open **Intensity Care of Mother and Kids**.
2. Click On Need a New Account.
3. Enter All Details About Aanganwadi (Aanganwadi Is, Password, City, Anm etc.).
4. Click on Create.

- **User Manual For registration Mother.**

1. Open **Intensity Care of Mother and Kids**.
2. Login in Apps by use correct Aanganwadi id and password.
3. Select New menu to New Mother registration
4. Enter All Details About Mother
(Emp. Name, DOB,, Male/Female, Address)
5. Click on Save.

- **User Manual For registration Kid.**

1. Open **Intensity Care of Mother and Kids**.
2. Login in Apps by use correct Aanganwadi id and password.
3. Select New menu to New Kid registration
4. Enter All Details About Kid
5. (Emp. Name, DOB,, Male/Female, Address)
6. Click on Save.

CODING:-

“Quality is not an act, it is a habit”—Aristotle

Coding or the code generation phase is next phase after the design; it is completely based on the output of the design phase. The design must be translated into a machine-readable form; the code generation step performs this task. If designed is performed in a detailed manner, code generation can be accomplished mechanistically. “Intensity Care Of Mother and Kids” each and every care has been taken to do not avoid even the minor things. All the inputs processes and outputs were designed carefully, so there is no need to say that the coding phase of “Intensity Care Of Mother and Kids” become an easier job.
